WARM ELASTIC UNDERWEAR

The warming linen for men and women is used for all those pathologies where the local thermal therapy is required: arthritis, lumbago, muscular pains, colitis, kidneys inflammation, etc. Articles are recommended also for preventing the inflammatory diseases of back and kidneys, due to long car trips, for low-mobility job and in cool places.

The warming effect is due to the high content of wool (54%), that it is very comfortable for the cotton surface in the contact with the skin. These style have also supporting effect due to the knitted-in support belt in the lumbar region, and the double woven in the lumbar and vertebral part (art..1200D, 2200D).

**LINE OF ELASTIC SUPPORT TUBULAR
BANDAGES FOR KNEE, ANKLE, CALF
AND THIGH**

Articles of the strong (class 1) and extra strong (class 2) classes of compression. Articles are indicated in all cases where fixation and the compression are required: after breaks, tendon and muscles tension, during rehabilitation period after plaster bandages with the immobilization of articulation, after operations...

The articles have in the inside surface the cotton, which makes them hypo-allergenic and ensures soft contact with the skin. Because of the special type of production, the articles are very thin, but also durable.
