Relax Maternity

RelaxMaternity **baby**

RelaxMaternity Baby, is RelaxSan's new range for children aged 6 to 36 months.

This new product range is manufactured using tubular technology, avoiding the annoying side seams that through friction can cause redness and irritation. The garments are made with a high percentage of natural and anallergic fibres near the skin and have a gradual and gentle extensibility and elasticity, allowing the garment to be always adherent to the skin, adapting over time to the growth in measurements and stature of a child, following him until the age of approximately 36 months.

The RelaxMaternity Baby range consists of 3 main product lines, those in natural cotton fibre, those in protein Milk fibre and those in CRABYON fibre.

RELAXMATERNITY BABY COTTON

The elasticated cotton fabric gives each garment maximum softness, stretch and fit, adjusting gradually as the baby grows. The cotton fibres come into direct contact with skin to ensure an anallergic, breathable, sweat absorbent and hygienic action.

RELAXMATERNITY BABY CRABYON

Nature's response to the need for "wellbeing" for our children.

The products of this line are made with Crabyon® yarn, a revolutionary fibre resulting from the most advanced Japanese technology. This innovative fibre is made from a blend of Chitosan, a polysaccharide and natural derivative of Chitin (a natural substance present in large amounts in crustacean shells) and viscose (a natural fibre derived from wood).

Chitosan, already known in medicine for its therapeutic properties and biocompatibility, has unique characteristics such as: proven bactericidal action, complete compatibility with human skin (anallergic) and a high capacity for moisture absorption.

Recent clinical studies carried out at the Department of Microbiology, University of Modena and Reggio Emilia, have demonstrated that the characteristics of chitin, already used in medicine, such as the ability to facilitate healing of dermatitis, the haemostatic, and analgesic characteristics, are equally characteristic of Crabyon®, giving RelaxMaternity garments the ability to prevent irritation, have a curative effect in cases of atopic dermatitis and play an active odour prevention role.

The high degree of comfort, anallergic quality, and the ability to maintain a balanced level of humidity and thus prevent dehydration, make the garments in the RelaxMaternity range particularly suitable for use in direct contact with sensitive, delicate, skin, particularly in underwear for our children.

The new Crabyon® fibre, being a mixture of chitosan and viscose, structurally connected to one another, keeps its particular characteristics over time, without being conditioned either by washing or by phenomena of abrasions or wear.

RELAXMATERNITY BABY MILK

A special mix of natural fiber such as Viscose (wood), Cotton and Milk fiber, guarantee to this line of products exceptional properties. Hypoallergenic, thanks to natural fibers. Antibacterial, thanks to the Milk fiber. High absorbency, thanks to viscose and Milk fiber. Milk protein, from which this fiber comes, give nourishment and softness to the skin, helping to keep it elasticized and silky. Products of high quality, comfort and softness.
