Relax Maternity

RelaxMaternity

RelaxMaternity, a complete range of seamless underwear dedicated to all the pregnant women and new mothers who, in addition to looking for underwear that meets their specific needs, also demand quality, comfort and wellbeing. RelaxMaternity consists of 3 Product lines: **COTTON**, **SILVER** and **MILK**, with a full range of briefs, bras and girdles, which model, sculpt, restrain and support the parts that inevitably grow during pregnancy and are overburdened by extra weight.

RelaxMaternity garments have been specially designed to help women to face the physical changes that occur in pregnancy, and in particular to:

- Help support the increasing weight of the parts of the body that are subject to increased volume.
- Help contain the elongation of muscle fibres, in order to preserve the natural elasticity of the skin.
- Help prevent sagging of the skin and muscle tissue.
- Distribute body weight properly in order to reduce fatigue and maintain good posture.
- Regain muscle tone in the postpartum period.
- Protect the skin, which becomes more sensitive and delicate in pregnancy, from friction and bacterial infections.

RelaxMaternity springs from RelaxSan experience, an established brand in the production of graduated compression stockings. It is thanks to this experience that RelaxMaternity garments are top quality, made with advanced technology and designed to offer women maximum functionality, convenience and hygienic protection.

RELAXMATERNITY COTTON

The elasticated cotton gives each garment maximum softness, fit and stretch, gradually adapting to the changes in the size of the abdomen, breasts, and buttocks. The cotton fibres come into direct contact with skin to ensure an anallergic, breathable, sweat absorbing and sanitizing affect.

The variable thickness of the fabric, along with support panels in the form of girdles, excellently perform their required function of containing and supporting, without compressing, while gently covering the different parts of the abdomen, buttocks and breasts.

All garments are seamless, thereby avoiding any friction on the skin, which can result in redness and irritation.

RELAXMATERNITY SILVER

A precious event such as pregnancy deserves equally precious underwear. The innovation of this line is in fact to be found in the use of a patented pure Silver thread (X-Static). The antiseptic and antibacterial properties of silver have been known since ancient times and recent studies have confirmed that silver acts as a bacteriostatic against most common bacteria. Thus RelaxMaternity SILVER was born, with the ability to protect the skin naturally from bacterial pathogens and the fermentation of sweat and milk secretions. These characteristics remain unaltered over time, even after repeated washing. More importantly for pregnant women, it has been demonstrated that silver fibres act as a shield against the electromagnetic radiation emitted by mobile phones, radios and TVs: laboratory tests have shown that RelaxMaternity SILVER fabric repels on average 98% of the electromagnetic waves to which we are commonly exposed. Elasticity, support, control and fit are the technical characteristics of RelaxMaternity garments. The presence of microfibre yarn ensures adequate softness of the fabric.

RELAXMATERNITY MILK

Elasticated and seamless, extremely soft to the touch, this product line introduces the innovative use of a natural fibre derived from milk proteins, which, when it comes in contact with the skin, provides nourishment and hydration, making the skin smooth and soft. Its use is particularly appropriate to help minimise and reduce skin blemishes caused by the enlargement of the abdomen and breasts, which can result in the loss of tissue elasticity.

Furthermore, Milk bio-fibre, thanks to its natural milk proteins, acts as a natural bacteriostatic, thus protecting the skin from infections, which it is more at risk of due to the delicateness of the biological stages of pregnancy and lactation. Despite being made of natural microfibre, RelaxMaternity Milk garments do not require special care regarding use or washing, the comfort and pleasurable feeling of softness they give remain therefore, unchanged over time, even after repeated washing.

COTTON

Briefs produced from pure stretch cotton, for natural contact with the skin and exceptional comfort.

art. 5150

SILVER

Briefs with X-Static silver thread, soft on the skin, seamless and super elasticated, they support without compressing the abdomen. The silver thread is an effective form of protection for the skin against bacterial pathogens and it acts as a shield to electromagnetic waves emitted by cellular phones, radios and TVs.

art. 5101

MILK

Briefs produced with the innovative Milk bio-fibre. Very elastic fabric, to meet both the requirements regarding fit and shaping and ensuring that the bio-fibre is in direct contact with the skin: in this way, the amino acids present in the milk, of which the fibre consists, come into contact with the buttocks, abdomen and hips, encouraging hydration and nutrition and making the skin pleasantly smooth and soft. In addition, Milk Maternity Briefs perform a natural bacteriostatic action, protecting the skin from the infections to which it is exposed.

Maternity Briefs

Seamless and super-elastic, incorporating a control panel that supports the abdomen from the bottom upwards: this allows the burden to be shifted to the hips and back, to correct posture and reduce the work of the abdominal muscles, avoiding excessive stretching, helping to prevent unsightly stretch marks.

With its special shape, it supports the buttocks, without compressing them, and progressively widens as the baby grows.

The thighs are highly elasticated and are not constricting, so that the blood circulates freely thus avoiding swelling and promoting the natural drainage of fluids that can help to avoid the formation of imperfections caused by cellulite.

SILVER

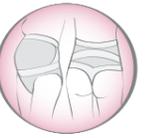

Girdle made with X-Static silver thread, soft on the skin, seamless and super-elastic, it supports without compressing the abdomen. The silver thread is an effective form of protection for the skin against bacterial pathogens and it acts as a shield against the electromagnetic waves emitted by cellular phones, radios and TVs.

Maternity Girdle

Made with seamless technology this is an innovative product that performs many functions:

- **Support:** an incorporated elasticated band supports the weight of the abdomen and distributes weight on the hips and back, reducing fatigue and facilitating correct posture.
- **Comfort:** seamless and very soft, it wraps gently around the abdomen while the microfibre provides soft contact with the skin
- **Practicality:** it slides on easily, like briefs or a camisole; the support band is placed under the abdomen, on hips above the buttocks, the upper band is then adjusted to cover the whole abdomen. The band, which is both high and soft, does not roll down.

COTTON

Panties made from pure stretch cotton for natural contact with the skin and exceptional comfort.

Maternity Thong

The growing need for increased ease and modernity of young mothers, as well as the need for hygiene and safety is fully guaranteed by this garment: equal in terms of functionality to the maternity briefs.

The thong shape, combined with the absence of seams, make these panties completely invisible under clothing, something that is particularly appreciated by young, dynamic women.

RelaxMaternity
Maternity Shorts

COTTON

Shorts made from stretch cotton for natural contact with the skin and exceptional comfort.

Maternity Shorts

The control structure is that tested in the Maternity Briefs model, with abdominal support band and special shape to contain the abdomen and buttocks.

In this garment, the briefs have been extended to shorts, to provide better coverage for the buttocks and thighs and to avoid the formation of constraints in the groin area, the main cause of venous leg disorders during pregnancy and of the formation and stagnation of fat deposits on the thighs.

COTTON

Pure stretch cotton bra for natural contact with the skin, exceptional comfort and effective support.

art. 5311

MILK

Bra made from milk bio-fibre, which, in contact with the breasts, promotes hydration and nourishment of the skin, combating imperfections resulting from the concomitant loss of elasticity and enlargement of the breasts. Additionally, the bra's bio-fibres bra act as a natural bacteriostatic, protecting the breasts from unpleasant infections.

Support Bra with Wide Shoulder Straps

The control capacity of this bra which supports and shapes, is provided by an elasticated band that sits under the breasts and runs the length of the bust; the band is joined to wide straps to better support the growing weight of the breasts and not pinch the shoulders.

The armpits are left free, in order to avoid irritation to the glandular system and the formation of cellulite deposits.

The cups are made of pure jersey cotton, their primary function being that of shaping, covering and supporting, without compressing the milk glands.

The jersey cotton guarantees breathability and oxygenation, as well as establishing soft contact with the skin.

Its practicality is maximised by the absence of hooks and stitching, which also makes it invisible under clothing.

COTTON

Pure cotton stretch bra for natural contact with the skin, exceptional comfort and effective support.

Support bra with Adjustable straps

This bra is designed to support and shape the breast according to different needs and to improve the fit: in fact, the containment zone beneath the breast is joined to the adjustable straps.

The armpits are left free, not upset the glandular system and not cause cellulite deposits. The cups are made of pure cotton jersey, which function primarily moulding, wrapping and support, without constricting the milk glands.

The cotton knit fabric provides a soft skin contact as well as ensure the oxygenation of the skin and perspiration.

The seamless technology (seamless) ensures total well-ness, as well as the invisibility of the bra under normal clothing.

RelaxMaternity
Nursing Bra

COTTON

Stretch cotton nursing bra for natural contact with the skin, exceptional comfort and effective support.

Nursing Bra

For young, modern women, breast-feeding is an act of sweetness that is also done outside the home, so it is extremely important that the bra is very practical and functional.

Bearing these women and this need in mind, RelaxMaternity has developed and patented a double-structured nursing bra, of maximum functionality, practicality and comfort.

The first structure consists of a control bra without cups, with a support band under the breasts, which goes around the bust and is joined to the wide shoulder straps.

The second structure consists of jersey cotton with elasticated edges that covers and protects the breasts. To make the breast accessible, just pull down the upper elasticated edge: there are no hooks to open; a single hand movement is all that is necessary.

This "breast covering" is made from soft, anallergic jersey cotton, which absorbs any milk secretions. The absence of seams in this nursing bra is functional, as it eliminates any risk of friction to the mammary glands, which tend to be swollen and sensitive.

MILK

The innovation of this Milk nursing bra is that the fabric is made of a bio-fibre derived from milk: from the milk the amino acids are retained which, when in contact with the breasts, nourish and moisturize them, leaving them soft and smooth, and reducing the risk of imperfections such as striations and cracked nipples. In addition to the Milk bio-fibre acts as a natural bacteriostatic, helping to protect the nipples from the infections to which they are exposed. The lack of seams increases the comfort of this garment, which does not cause friction or irritation even to swollen breasts.

SMART Nursing Bra

RelaxMaternity completes its range with a new concept in nursing bras, very low-cut, high control, high elasticity and very simple in performing its function.

The control structure is that of the band under the breasts, running the length of the bust and joined to the shoulder straps. This form of control does not create any problems for the mammary or axillary lymph glands.

The cotton fabric, which covers the breasts, is particularly flexible in both directions; therefore, facilitated by generous neckline, it is possible to extract the breast by simply moving the fabric toward the outside, with a simple movement of the hand. The elasticated fabric, thickened on the outside of the breast, helps support the breast during feeding. When finished, the breast is covered again and the fabric takes on its role in supporting and shaping the breast.

The fabric is rich in cotton, therefore it is soft, anallergic, and able to absorb any milk secretions.

The absence of seams in this nursing bra is functional, as it eliminates any risk of friction to the mammary glands, which tend to be swollen and sensitive.

COTTON

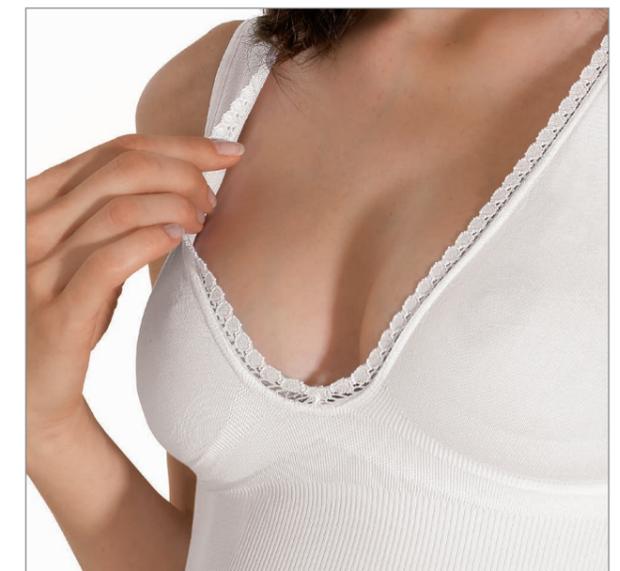

Stretch cotton Vest Top for natural contact with the skin, exceptional comfort and effective support.

Nursing vest top

As a nursing vest top, tht consists of a real nursing bra, with all the features of the RelaxMaternity SMART Nursinge upper part corresponding to the breas Bra, therefore:

- elasticated support band under the breasts.
- stretch cotton in both directions, at the cups.
- support and elasticity of wide straps.
- low cut, elastic, soft, neckline , for breast extraction with a simple hand movement in total comfort.
- breast support during feeding.
- absorption of any milk secretions.
- seamless, to avoid friction to the mammary glands.

In stretch cotton this vest top, adheres perfectly to the breasts, hips, buttocks, back, avoiding unattractive bulges. The front part, corresponding to the abdomen is highly elasticated to accommodate the return to a normal postpartum figure, without, however, squeezing or compressing. Suitable for use during pregnancy.

art. 5300

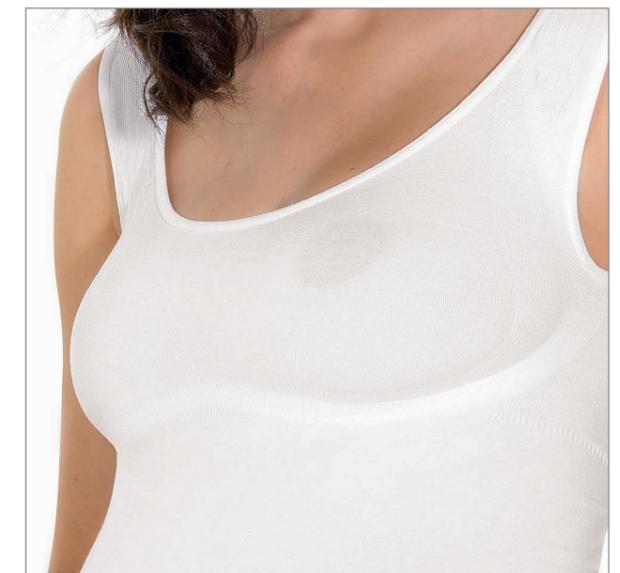

COTTON

Stretch cotton Vest Top, for natural contact with the skin, exceptional comfort and effective support.

Maternity Vest Top

This Vest Top in stretch cotton clings perfectly to the hips, buttocks and shoulders, making it invisible and avoiding unsightly bulges.

Cotton regulates perspiration on the skin and keeps body temperature, also the sweat away from the critical points of the body and avoids the unpleasant fermentation, which causes skin irritation and odour. The front, corresponding to the abdomen is slightly shaped to fit and give comfort, even if the belly was bulky. Under the breast tissue is blocked with a stitch, in order to provide a modest effect of nursing support, but above all to give moulding, shaping and fitting the breast, both pregnant and lactating after delivery.

COTTON

Briefs made from pure stretch cotton for natural contact with the skin, exceptional comfort and effective support and control.

Post-partum Briefs

These briefs are specifically designed to facilitate recovery of abdominal muscle tone, compromised by pregnancy; while its special shape helps buttocks and abdomen to regain correct muscle tone.

The pressure on the waist is designed to have a slimming effect, to regain a pleasing appearance.

The high percentage of cotton, combined with the lack of seams, avoids irritation and ensures perfect breathability and oxygenation of the skin, which can therefore return to its former softness and elasticity.
